Computer requirements

Figma: Learning Design from Basics to Pro

Operating system: Windows 10 or Windows 11 · macOS 13 Ventura or later · Linux (Ubuntu, Fedora) with an up-to-date browser

Browser: Google Chrome or Microsoft Edge 122 or later — Figma works best in them. Firefox 128+ or Safari 17.4+ also work

Graphics: WebGL support. To check, open get.webgl.org — you should see a spinning cube

RAM: at least 4 GB, 8 GB recommended

Free disk space: at least 1 GB

Screen resolution: at least 1280×800, 1920×1080 recommended

Internet: stable connection, 15 Mbps or faster

Also needed: a mouse with a scroll wheel · for online classes — a camera, a microphone and headphones

** Figma runs in the browser — there is nothing to install. The more complex the project, the more powerful the computer it needs. Under Figma's rules, the account is registered by an adult: for a child, a parent creates it.*
